EDUCATION

Amrita Vishwa Vidyapeetham, Amritapuri

Bachelors in Technology

Computer Science and Artificial Intelligence
September 2021 – July 2025

PROJECTS

Antibiotic Stewardship project — *frontend*, *server*

I made a portal for the microbiology department of Amrita Hospital which is the one of the largest super-speciality health center in India. Using this portal, the hospital manages their septic patients undergoing reserved antibiotic medication, which includes checking their active patients, keeping their culture reports, clinical signs, and getting their daily medical report reviewed by a doctor.

wikiGeoEditor— *Code*

WikiGeoEditor is a tool I created for Wikipedia editors. Here you can see the active contributors and editors around the world. It gets its data by scraping a website, done using a cron job. The data is then displayed on the front end in a table with multiple filter options.

CIR Internship Portal— *Code*

This portal was made for my university's Corporate and Industrial Relations(CIR) department. It helps the students get job internships through the CIR department and aids the department in managing incoming internships from other companies.

GitHub-Duel— *Code*

It is a fun personal project website to compare GitHub profiles. Here, the user enters two GitHub profile names, and it will say which is better. It also scores the project on the basis of their contributions, pull request, projects, followers etc.
